Modding Bg2ee For Mac

My fear is entering the command and it affecting things I don't intend outside the game.. command: line 5: /Setup-deArnise: No such file or directory logout Saving session.. I don't know how to be certain that I'm in the correct directory in Terminal I don't know how to direct it to where I want the commands to work.. Mac OS X: This mod is packaged and installed with WeiDU To install, simply extract the contents of the mod into your game folder.. command; exit; /Users/xx/Library/Application Support/Steam/steamapps/common/Baldur's Gate II Enhanced Edition/OSX-deArnise_v5/Setup-deArnise.. I posted this in the steam forum and they suggested I ask here I'm having trouble getting any mods to work.. when I download the mod folders, they're not zipped or anything, they're just folders.

Since you're here and being gracious (thank you), I have a seriously noobish question.. command; exit; /Users/xx/Library/Application Support/Steam/steamapps/common/Baldur's Gate II Enhanced Edition/Setup-deArnise.. Modding Bg2ee For Mac DownloadModding Bg2ee For Mac DownloadThis is where I get confused.. If properly extracted, you should have a folder called 'will_to_power,' a file called 'weidu,' and the 'Mac WeiDU Launcher' in your game directory.. Games like touchgrind bmx for mac download It says Application Support doesn't exist.. copying shared history saving history truncating history files completed [Process completed] Any chance someone can give me a 'for dummies' explanation? Thanks, subtledoc.. I can't figure out how to move through to Application Support/steam/steamapps/common/bgiiee.

I found the file location (library/application support/steam/steamapps/common/BG2EE with the chitin file.. command: line 5: 65689 Killed: 9 /Setup-deArnise logout Saving session copying shared history.. So I copy the folder into the game folder but when I click the setup command file, it always gives me an error when it's in the folder (using the De'Arnise romance mod as an example): /Users/xx/Library/Application Support/Steam/steamapps/common/Baldur 's Gate II Enhanced Edition/OSX-deArnise_v5/Setup-deArnise.. saving history truncating history files completed [Process completed] Or this when it's moved to the game folder: /Users/xx/Library/Application Support/Steam/steamapps/common/Baldur 's Gate II Enhanced Edition/Setup-deArnise.. I did get into Application Support by doing cd ~/Library/Application Support/, and could get to the common folder, but am stuck at how to get into the bg2ee folder in there so I can get to the game directory.

moddingway

I can always do a clean install if I mess it up inside the game Can you please explain how to navigate to the correct directory so I can try the solutions on the HHG for mods? Edit: I've done some searching, can do 'cd library' and get to that folder.
